## **Issuance of Environmental Decision**

### **Addressing Runway 4R/22L Displacement of Threshold at Detroit Metropolitan Wayne County Airport (DTW) Romulus, Michigan**

Wayne County Airport Authority (WCAA) has completed and Federal Aviation Administration (FAA) has approved for public distribution, a Final Environmental Assessment (EA) and a Finding of No Significant Impact/Record of Decision (FONSI/ROD) for the displacement of the runway threshold on Runway 4R/22L at Detroit Metropolitan Wayne County Airport. The Final EA describes the probable economic, social, and environmental effects of the proposed project and the alternatives considered.

On the basis of the evaluation of the Final EA, dated August 2013, the FAA has approved a FONSI/ROD for the following development:

- Displacement of the Runway 4R threshold approximately 500'; relocation of the Approach Light System, glide slope antenna and related FAA NAVAIDS; reconfiguration of the adjacent taxiway and hold pad; installation of a visual screen south of Runway 4R; and improvement of the access road to the deicing fluid storage tank staging area, and new and or revised flight procedures. The displacement of Runway 4R threshold will also result in the reconfiguration of the adjacent taxiway and hold pad. In order to maintain efficient aircraft traffic flow all non-wide body aircraft will depart from the intersection of Taxiway Y2, instead of the end of the runway.
- Installation of a visual screen between Taxiway A and the end of Runway 9L-27R; minor relocation of the localizer antenna and relocation of an airport service road.
- In the Runway 22R approach minor relocation of the airside service road, landside service road and perimeter and security fence.

The decision documents, background reports, Final EA and FONSI/ROD are available for review through **April, 30, 2014** at the following locations:
